einen Vortrag über das Thema:

“Coupled-cluster theory (for molecules and prospects for its application in the condensed phase)”

Abstract:

Coupled-cluster theory is the approach of choice for solving the electronic Schrödinger equation of molecular systems with high accuracy. I will give an outline of the basic theory and will address three main challenges: (a) reaching the complete basis set limit, (b) treatment of open-shell systems, and (c) reduction of the computational scaling behavior. In particular, the latter is of interest when considering the prospects of applying coupled-cluster theory to problems in the condensed phase.

Interessenten sind herzlich eingeladen.

Prof. Dr. C. Holm
Dr. Rudolf Weeber
Dr. Alexander Schlaich
